Full-Stack & AI Engineer — React/Next.js · Node.js/FastAPI · Agent Loops & RAG

SUMMARY

Full-stack engineer who builds and ships products end-to-end, usually solo: React/Next.js frontends, Node.js and FastAPI backends, and data pipelines. Builds agentic LLM features as core product: autonomous mobile agents, RAG document pipelines, and AI notification generation. Built Mapping HYD (mapmyhyd.com), an automated platform tracking 4,000+ live jobs across 150+ employer ATS boards. Claude Certified Developer (Anthropic) and AWS Certified AI Practitioner; Multicloud Engineer Associate at Cognizant.

TECHNICAL SKILLS

- **AI & Agents:** Autonomous agent loops (observe → plan → act), Model Context Protocol (MCP), structured tool calling, RAG (embeddings, Pinecone, document ingestion), Claude 3.5 Sonnet, Gemini API, agentic evals, prompt tuning.
- **Languages & Core:** TypeScript, JavaScript, Python, Kotlin, Dart, Java (Core), SQL, HTML5/CSS3.
- **Frontend:** React, Next.js (App Router, SSR/ISR, Server Actions), Tailwind CSS, Framer Motion, HTML5 Canvas, Web Audio API, Three.js / React Three Fiber, Leaflet.
- **Backend & Data:** Node.js, Fastify, Express, FastAPI, REST API design, Server-Sent Events (SSE), WebSockets, background queues, JWT auth; Cloud Firestore, PostgreSQL, Supabase, Prisma, Redis, SQLite.
- **Cloud & DevOps:** AWS (EC2, S3), Azure/GCP monitoring & telemetry, Vercel, Docker, GitHub Actions CI/CD, Oracle Cloud VM.
- **Mobile:** Android Native (Kotlin, Accessibility Service, IPC) and Flutter/Dart; 2 apps live on Google Play.

EXPERIENCE

Multicloud Engineer Associate — Cognizant — Feb 2026 – Sep 2026

- Build and maintain monitoring dashboards for live cloud services across AWS, Azure, and GCP: metric alerts, threshold rules, and anomaly detection as part of structured multicloud training.
- Profile backend latency bottlenecks and trace logs across microservices to catch service degradation before customer impact.

Freelance Full-Stack Developer — Self-employed — Dec 2025 – Feb 2026

- Delivered 3 production platforms for cybersecurity clients, from requirements to live deployment (React/Next.js, Node.js REST, Firebase).
- **CyberSecurityTrain:** LMS with course delivery, Razorpay payments, custom exam engine, client-side PDF certificates, and multi-role admin ERP.
- **TheCyberSeal & HRMS:** B2B threat dashboard with lead-capture; HRMS handling real-time employee attendance, payroll hooks, and admin audit logs.

AI / Full-Stack Automation Intern — Callus — Oct 2025 – Dec 2025

- Built an AI SEO platform: FastAPI backend with a vector RAG pipeline for document querying and content analysis, plus a React (Vite) frontend streaming tokens in real time via SSE.

Technical Intern — Getto — Jul 2025 – Oct 2025

- Built React UI components and vendor workflows for the Getto Vendor Panel; worked with the backend team on API contracts and PostgreSQL query tuning.

PROJECTS

TapPilot — Voice-Driven Android Agent (Prototype) | Kotlin · Accessibility Service · Gemini API — 2026

- Built a phone agent that executes multi-step device tasks: reads the screen hierarchy through Android's accessibility tree, feeds structured state to Gemini, and plans actions (tap, scroll, type).
- Keeps decision latency under 450ms; re-inspects screen state after every transition to catch unexpected popups or failed taps (82% task completion on test workflows).

Mapping HYD — Live Jobs & Startup Platform (mapmyhyd.com) | Next.js 14 · Firestore · GitHub Actions — Live

- Solo-built platform mapping 1,100+ startups and 4,000+ live jobs across 150+ ATS boards (Greenhouse, Lever, Ashby, Workday, SmartRecruiters).
- Found the feed dropping vacancies at Firestore's 1 MiB document limit and wrote a byte-capped multi-shard codec that splits data across chunks without dropping jobs (+300% capacity).
- Built a viewport-diffing map renderer reconciling ~1,100 markers/frame at steady 60 FPS without DOM re-mounts; automated scrapes on GitHub Actions to keep cloud costs at zero.

Pushbrain — Notification Platform for Indie Devs (pushbrain.dev) | Fastify · TypeScript · React · Gemini — Live

- 26k-line TypeScript monorepo with cross-platform client SDKs (JS, Flutter, React Native); integrated Gemini to generate context-aware notification copy and A/B test variants (+34% simulated open rate) with AES-256-GCM tenant encryption.

Golden Hour — Film Camera Mobile App | Flutter · Firebase Functions · Razorpay — Google Play

- Real-time camera app with 30 film-stock color grades; freemium with in-app purchases, published on Google Play.

Also shipped: DriveScope (3D car comparison with 5-year cost simulation, Next.js + React Three Fiber), Resumit (AI resume tailoring, 200+ users), Savyit (offline-first SMS expense tracking Flutter app on Google Play), two Chrome extensions (5.0 rated).

CERTIFICATIONS & EDUCATION

- **Claude Certified Developer** — Anthropic (Prompt Engineering, Tool Calling, Agentic Workflows, MCP)
- **AWS Certified AI Practitioner** — Amazon Web Services (GenAI Pipelines, Model Tuning, AWS Cloud Infrastructure)
- **B.E., Computer Science and Engineering** — GITAM University, Hyderabad • 2021 – 2025 • CGPA 7.64 / 10
